COVID-19 SMART HEALTH QR CODE PROVIDER REMINDERS

Post COVID-19 vaccination, remember to:

Enter patient and vaccination data in Nevada WebIZ. QR codes can hold up to 4 doses of COVID-19 vaccine, but most patients should only have three or fewer doses entered. It is vital that records are entered correctly to avoid duplicates. Best practice includes checking to see if a patient is already in Nevada WebIZ before creating a new record.

Enter all required demographic data so the patient can access their own record. You must enter first name, last name, gender, date of birth (DOB), email and/or cell phone number. Entering an email address is preferred over a phone number, but both are accepted.

Access to their SMART Health QR Code is available for providers to download and print for patients; or the QR code patients that they can access their SMART Health QR Code through the public portal. Remind patients that they can access their COVID-19 record by going to the Nevada Web IZ public access portal at **https://izrecord.nv.gov**

In the Main Application, 'SMART Health QR Code' will be visible at the bottom of the COVID-19 vaccination record either from the links option on the patient demographics screen, or from the Reports>Patient>COVID-19 Vaccination Record Report Link.
