## **Vaccination data for newly eligible population added to COVID-19 Dashboard**

Carson City, NV — Today, [Nevada's COVID-19 Dashboard](#) has been updated to include COVID-19 vaccination for those ages 6 months to 4 years old.

Vaccination began for this newly eligible age group in June, and those who have been vaccinated are now included as vaccinations initiated and also under their age group on the demographics page.

The COVID-19 Dashboard update will change the percent of the eligible population that has been vaccinated to include this younger population.

With this addition of vaccination for those ages 6 months to 4 years, more than 200,000 children will be added to the denominator indicating the percent of the population who have initiated or completed vaccination as shown on the Current Status tab of the Dashboard.

The free COVID-19 vaccine is available in locations statewide and more information can be found at [NVCovidFighter.org](https://NVCovidFighter.org) or by calling 800-401-0946.

***Reminder:*** Updates to the Dashboard are applied incrementally and it may take up to an hour for all data to display.
